

FAQ's regarding Math Instruction and Resources:

1. Why is there a change in math?

When looking at the old standards (many years back) the % of students who embrace and understand math has always been very low. For years many students have been struggling in math and few have chosen to take the path of higher math classes and careers that involve math. This is a problem. Many of the struggles are due to the lack of deeper understanding of math concepts and therefore students are not able to make connections to new concepts or real life applications. This generation of students, more than ever, needs to have the opportunity to understand math, have confidence in their ability and be strong mathematicians. So a change is definitely necessary.

2. Are our teachers prepared?

The state adopted the Common Core State Standards (CCSS), now the AZ College and Career Readiness Standards (AZCCRS), in 2010. DVUSD has spent the last 4 years training teachers. Teachers have had 4 years to attend District trainings, state trainings, as well as learn on-the-job in the classroom. However, most teachers were focused on the old standards, as students were being assessed on old standards, and they are now faced with the task of learning the AZCCRS standards as they teach them. At the District level, we support our teachers with trainings each year, a solid resource, assessments aligned to the resource, Print Shop ordering, Smart Board lessons aligned to the lessons, manipulatives, email and phone call help, and individual or level meetings at schools. With all of these in place, the hope is that this would alleviate some of the time consuming tasks to allow teachers to just focus on learning their grade standards.

3. Why is the new math resource so plain?

We have had textbooks for years, with much color and pretty pictures, but these features have done little to enhance the learning of the students. The beauty of a resource is not in how it looks on the outside, but the content on the inside. Engage NY is a beautifully written resource completely aligned to the AZCCRS for math. For K-5, the essence of learning involves manipulatives and visual representations that cannot be found in a textbook. We encourage our parents to understand the level of hands-on learning that is involved in student learning that they don't see at home, which replaces the colorful worksheets students did in the past. The strategies students are working on for simple addition and subtraction are strategies that will transfer for many years into higher level math content and classrooms. Math instruction is not about one school year. Students are building strategies that will help them make connections in mathematics for years to come. These connections have been lacking in the past.

4. Where can I go as a parent for help online?

To view Engage NY for the specific grade level lessons, use the links below. In addition, Eureka Math, the creators of Engage NY, has 2 page handouts for parents for each K-5 module explaining some of the strategies that will be used for a specific module.

Engage NY Site (provide parents access to the lessons to review): [K-8 Grades](#)
